Armoth[®] ITC Program

Personalized Wood Cutting Technology

Is it for you?

If you process fresh wood, dry wood, glued wood, common or exotic wood types, use sawmills that are horizontal, vertical, single or multi-head, whether you are in multipurpose logs sawing, pallet manufacturing and resawing, parquets, flooring, lamellas, stave mills or pallet dismantling

You can achieve more!

REACH YOUR HIGHEST EFFICIENCY - band saw blade cutting time from 24 to 120 hours between service, depending on the application

REACH THE FASTEST CUTTING PROCESS - blade speed ranging from 20 to 120 m/s and a feed rate up to 100 m/min, depending on the application

REACH THE HIGHEST CUTTING PRECISION AND SURFACE QUALITY, LOWERING ENERGY CONSUMPTION - kerf ranging from 1 to 3 mm depending on the application

What do we offer?

MACHINERY

Guidance in the production planning and optimization process, including equipment selection.

TRAINING

Training program adjusted to improve qualifications of machine operators.

CUSTOM BLADES

Individually designed, tailored to your needs, high quality band saw blades in the width range of 25 to 210 mm.

MACHINE SERVICE

Calibrating and upgrading existing equipment to improve your production process.

Fot. VOLLMER Werke (acknowledgement of copyright)

SPECIALIZED BLADES SERVICE

Professional blades service using high quality Vollmer CNC machines.
